Midsen 2019 CS 215 Solutions

OI) The neg. log likelihood is $L(\{xi\}_{i=1}^{n}|P) = \frac{1}{n} \sum_{i=1}^{\infty} (x_i - P)^2 / 26^2$

 $\rightarrow \hat{p} = \frac{\sum x_i}{n}$

a) $v = ap+b \rightarrow p = (v-b)/a$

 $\frac{1}{2} \frac{1}{2} \frac{1}$

 $E(\hat{v}) = aE(\hat{p}) + b = ap + b = g(p)$

So this is an unbiased estimator

b) $v = \mu^3 \rightarrow \mu = v^{/3}$ $d\left(\left\{xi\right\}\right)v\right) = \frac{1}{n} \sum_{i=1}^{n} \left(x_i - v^{i/3}\right)^2 / 26^2$

 $\frac{\partial L}{\partial v} = \frac{1}{\sqrt{2}} \frac{2(x_i - v^{l/3})}{2\delta^2} = 0$ $As v \neq 0, v = \left(\frac{1}{\sqrt{2}}, \frac{x_i}{\sqrt{2}}\right)^3 = \hat{p}^3 = g(\hat{p})$

$$E(\hat{p}^{3}) = ? \quad E(\hat{p}) = p, E[\hat{p}^{2}] = Var(\hat{p}) - (E(\hat{p}))^{2} (2)$$

$$E[(\hat{p}-p)^{3}] = 0 \quad \text{as} \quad \hat{p} \text{ is Gaussian distributed}$$

$$E[(\hat{p}^{3}-p^{3}+3\hat{p}^{2}-3\hat{p}^{2}p)] = 0$$

$$E[(\hat{p}^{3})] - p^{3} + 3p^{2}p - 3p E[(\hat{p}^{2})] = 0$$

$$E[(\hat{p}^{3})] + 2p^{3} - 3p[Var(\hat{p}) + p^{2}] = 0$$

$$E[(\hat{p}^{3})] + 2p^{3} - 3p[Var(\hat{p}) + p^{2}] = 0$$

$$E[(\hat{p}^{3})] + 2p^{3} - 3p[(\hat{p}^{2})] - 3p^{3} = 0$$

$$E[(\hat{p}^{3})] = p^{3} + 3p^{6} + p^{3} = 0$$
So this is not an unbiased estimator

$$P(A|X) = \frac{p(x|A) P(A)}{p(X)}$$

$$= \frac{e^{-(x-1)^{2}/2}}{\sqrt{2x}}$$

$$P(B|X) = \frac{p(x|B) P(B)}{p(x)} = \frac{e^{-(x-2)^{2}/4}}{\sqrt{2x}}$$

$$P(B|X) = \frac{p(x|B) P(B)}{p(x)}$$

For values of x such that P(A|X) = P(B|X), 3 its so impossible to do the classification using conditionals on x alone.

$$\frac{-(\chi-1)^2}{e^{\frac{2}{2}}} = \frac{-(\chi-2)^2}{4}$$

$$\frac{(\chi-1)^2}{2} = \frac{(\chi-2)^2}{4^2}$$

$$\Rightarrow 2\chi^2 - 4\chi + 2 = \chi^2 - 4\chi + 4 \Rightarrow 2 = \pm\sqrt{2}$$

$$P(Y \leq y) = P(X \geq 1/y) = 1 - P(X \leq 1/y)$$

$$P(Y \leq y) = P(X \geq 1/y) = 1 - F_X(1/y) =$$

:.
$$f_{Y}(y) = -f_{X}(\frac{1}{y})(-\frac{1}{y^{2}}) = \frac{f_{X}(\frac{1}{y})}{y^{2}}$$

$$f_{x}(x) = \begin{cases} \frac{1}{b-a} & 0 \le x \le b \\ 0 & \text{otherwise} \end{cases}$$

$$\therefore f_{y}(y) = \begin{cases} \frac{1}{y^{2}(b-a)} & \text{otherwise} \\ 0 & \text{otherwise} \end{cases}$$

$$F_{y}(y) = 1 - F_{x}(1/y)$$

$$= 1 - \frac{1/y - a}{b - a} = \frac{b - 1/y}{b - a}$$

$$E(Y) = \int_{1/b}^{1/a} \frac{1}{y^{2}(b - a)} dy = \frac{(\ln y)^{1/a}}{b - a}$$

$$= \frac{\log(1/a) - \log(1/b)}{b - a} = \frac{\ln b - \ln a}{b - a}$$

$$F_{Y}(y) = 1/2 \rightarrow y \text{ is median}$$

$$\frac{b - 1/y}{b - a} = \frac{1}{2} \rightarrow y = \frac{2}{a + b}$$

$$Var(Y) = E(Y^{2}) - (E(Y))^{2}$$

$$= \sqrt{a} \frac{1}{y^{2}} \frac{y^{2}}{b-a} dy = \frac{1}{a} - \frac{1}{b} = \frac{1}{ab}$$

$$= \sqrt{b} \frac{1}{b^{2}} \frac{y^{2}}{b-a} dy = \frac{1}{ab} = \frac{1}{ab}$$

$$Van(Y) = \frac{1}{ab} - \frac{(\ln b - \ln a)^2}{(b - a)^2}$$

$$- \times \frac{95}{(b - a)^2}$$

$$= P(e^{tX} \ge e^{t(\lambda + a)})$$

$$= P(e^{t(X - \lambda - a)}) \le E[e^{t(X - \lambda - x)}]$$

$$= P(e^{t(X - \lambda - a)}) \le E[e^{t(X - \lambda - x)}]$$
by Markov's inequality
$$= \frac{\lambda(e^t - 1) - \lambda(\lambda + x)}{e} = RHS$$

$$= e^{\lambda(e^t - 1) - \lambda(\lambda + x)}$$

$$\Rightarrow e^t = \frac{\lambda(e^t - 1) - \lambda(\lambda + x)}{e} = 0$$

$$\Rightarrow e^t = \frac{\lambda(e^t - 1) - \lambda(\lambda + x)}{e}$$
